

# October 2021 Release Notes

## What's New?

- New Waivers (Beta)
- Guest Record Data Quality
- Improved Addon Sorting
- Enhanced Category Pop-up on Clipboard Page
- Bug Fixes

October blew by just like fall leaves on a windy day. As pass prices increased so did the pressure to deliver tons of features before the start of the season. Luckily our team came prepared to deliver a ton of value this month. Several months of preparation helped us deliver our newest feature, Waivers, which is now in Beta. Many hours of work went into the Rental Integration from both OnlySky and RezoSystems. And we revamped a huge piece of our software to get ready for an error free Winter.

Below is a roadmap of projects delivered this quarter.

## New Waivers (Beta)

### Quick Review

- Sign or send the waiver to every participant in your group
- Guest must open the waiver to read it
- Tools to manage guest waivers
- Automated email reminders to sign waivers
- Quick action tool to send a reminder on the go
- Apply different waivers to different products or addons
- Create liability waivers in app
- A lot of editing capabilities like yellow box with red border and bolding

Our newest feature, Waivers, is the perfect tool to help manage the acceptance and signing of liability waivers more efficiently within our application. This includes many new features related to creating, editing, managing, and distributing liability waivers for your location.

Guests will now need to click on the waiver to read and sign it. They must accept that they are signing on behalf of themselves or the parent or guardian of the participant.

## Guest Record Data Quality

### Quick Review

- Purchaser and guest data are now uncoupled
- Increase in guest data quality

This is an internal project without external update to the software, so its effects are difficult to see, but no less important. Have you ever had a 43 year old end up in a 7 and under lesson? This could happen because OnlySky was making an assumption that the Purchaser and Guest 1 were the same person. Now you don't have to worry about that because we fixed it. We know this fix will help solve a lot of challenges for the upcoming season.

## Improved Addon Sorting

#### *Quick Review*

- Disabled addons are now under a button

We know some of you have mile long lists of addons on your addon page. Now, with the improved functionality of addon sorting, disabled addons can now be found under a button. Just have your 2021/22 season addons enabled to eliminate the need to scroll, scroll, scroll.

#### **Enhanced Category Pop-up on Clipboard**

#### *Quick Review*

- When assigning a shift on the Clipboard, easily select a category

You no longer need to wrestle with the category pop-up when assigning shifts and categories. Now, the pop-up holds steady and you can easily select the category.

#### **Bug Fixes**

- Payouts not appearing in Reports fix
- Reminder email fix
- Guest search fix
- Itinerary Column Display fix
- Waiver fix
- Age Calculation fix
- UI updates
