

# September 2021 Release Notes

## What's New?

- Quick Time Adjustments for Lessons
- Enable or Disable % Off for Dynamic Pricing on Calendar View
- Bug Fixes

September was an awesome month, while many of us were traveling for ski industry trade shows and expos, our Dev team was buckled down diligently working on a number of new features.

In September, we managed to release one great time saving new feature, while developing and finalizing some exciting new features that will be released in early October.

### Quick Time Adjustments for Lesson

#### *Quick Review*

- Manage guest request with speed and ease
- Easily change the lesson time on the Clipboard
- Extend the lesson time without adding new times in product configuration

This new feature adds a ton of flexibility to lesson scheduling, where before it was a several step process to modify a lesson time, now with a few clicks the guest and instructor will be updated with the new lesson time.

### Enable or Disable “% off” for Dynamic Pricing on Calendar View

#### *Quick Review*

- More options for our Dynamic Pricing feature
- Option to disable “% off” on the calendar when a guest is purchasing an item
- Use Dynamic Pricing as an incentive to pre-purchase

This gives you the flexibility to use Dynamic Pricing as an incentive with a discounted price displaying the “% off” or disable the “% off” for standard rate tickets online and a surcharge for day of tickets purchased at the window.
